FOREWORD

This is the fifth in the series of the publication titled World Weather Records. The first three, prepared by H. H. Clayton and Miss F. L. Clayton, were published by the Smithsonian Institution[1]. The fourth in the series, prepared at the Blue Hill Meteorological Observatory, was published by the U. S. Weather Bureau[2]. These earlier issues, which included climatological information through 1950, have had global distribution and have been widely used for meteorological and climatological research. At its Fourth Congress in Geneva in April 1963, the World Meteorological Organization, in Resolution 32, sponsored the publication of the 1951-60 World Weather Records by the U. S. Weather Bureau[3] and urged Members to participate in the project by furnishing the required data for stations under their jurisdiction.

In previous discussions at the meeting of the WMO Commission for Climatology held in December 1960, it was indicated that the Environmental Science Services Administration, Environmental Data Service[3] publication Monthly Climatic Data for the World, sponsored by the WMO, would serve as a basis for the 1951-60 volume. Insofar as practicable, continuity of the list of stations which had appeared in earlier World Weather Records was also desired. Thus a considerably greater number of stations than has previously appeared in this series is included in the current issue. The greater number of stations and difficulties which have been encountered in obtaining and processing the data have made it advisable to publish the data for 1951-60 in six smaller volumes rather than in a single large volume. Volume 1, North America, covered Alaska, Canada, Mexico and the contiguous United States and was published during 1965 by the U. S. Weather Bureau. A second volume, covering Europe, and a third volume covering South America, Central America, West Indies, the Caribbean, and Bermuda were published in 1966. This fourth volume provides data for those areas of Asia which are included in WMO Region II. The order of issuance of the remaining two volumes has not been established but the geographic areas to be included are:

Africa

Australia, New Zealand, Antarctic and Oceanic Islands, Ocean Weather Stations.

Requests for data were sent to more than 150 meteorological services throughout the world. Response to this appeal has been most gratifying. Nearly all data contained in this issue have been obtained from official sources.

These data were placed on punched cards and processing and preparation of copy for the printer were accomplished by machine. This project has been carried out by personnel of the Environmental Data Service under overall direction of Dr. H. E. Landsberg, former Director and Dr. W. C. Jacobs, Director. Generally speaking, the program has been broken down into two component parts. General planning was done by the staff of the Office of Data Information, Foreign Branch under the guidance of Mr. David Smedley. The vital tasks of assistance in planning, the preparation and maintenance of correspondence, and guidance of the timely completion of each of the many phases of the project so as to ensure readiness of all sections by the deadline date, have been performed by Miss Gertrude A. Fricke. The machine processing and preparation of printers copy

[1] World Weather Records, Smithsonian Miscellaneous Collections, Vol. 79, 1927; Vol. 90, 1934; and Vol. 105, 1947, Smithsonian Institution, Washington, D. C.

[2] World Weather Records, 1941-1950; 1959, U. S. Weather Bureau, Washington, D. C. 1361 pp.

[3] A 1965 reorganization placed the U. S. Weather Bureau and its WMO responsibilities in the Environmental Science Services Administration. The climatology programs of ESSA are administered by its Environmental Data Service.

have been done by the staff of the National Weather Records Center, Asheville, N. C. under the supervision of Dr. Gerald L. Barger, former Director, and Mr. William H. Haggard, Director. At the National Weather Records Center the planning, programming and supervision of the work was by Mr. Norman E. Poultney, Mr. Gaston Haller, Mr. Raymond H. Smith, and Mr. Marvin W. Burley. Constant coordination was maintained between the two staffs to accomplish planning, quality control, and preliminary and final checking in preparation for printing.

The Environmental Science Services Administration extends its gratitude to the meteorological services and other organizations who generously supplied data. We wish particularly to express sincere appreciation to the individuals, too numerous to list, who assisted in the collection and preparation of the data, including the many unnamed observers whose untiring efforts made this world-wide project possible.

Special thanks are extended to the Smithsonian Institution for permission to reproduce portions of the conversion tables from Smithsonian Meteorological Tables, Sixth Revised Edition, First Reprint, 1958.

EDITORIAL NOTES

This issue of the World Weather Records is primarily concerned with data for 1951-1960. As in previous issues, data for earlier years have been included when appropriate and available. The first issue included data from earliest records available at that time up to 1920. Data for the periods 1921-1930, 1931-1940, and 1941-1950 were published in succeeding issues.

The present volumes continue, insofar as possible, the record of monthly mean values of station pressure, sea level pressure and temperature, and monthly total precipitation for stations listed in previous volumes. Since the station network from Monthly Climatic Data for the World served also as a basic network for the 1951-1960 volumes, many new stations have been included.

Information concerning the exposure of instruments, hours of observations, and methods of adjusting or correcting observational data has been included in station notes whenever it was supplied.

Lake levels, freeze and thaw dates, and sunspot numbers are included as available. No attempt has been made at a world-wide coverage of these statistics beyond a general request to countries to send these data whenever available.

SOURCES OF DATA

Unless otherwise stated in the notes, data were supplied by national meteorological services whose addresses may be found in publications of the World Meteorological Organization. In isolated instances data were extracted from official publications in order to permit a geographic coverage that might otherwise not be possible. CLINO data are long term means taken from the World Meteorological Organization publication, Climatological Normals (CLINO) WMO/OMM - No. 117 T.P. 52 or are values supplied by the respective authorities.

GROUPING OF STATIONS AND ARRANGEMENT OF DATA

As indicated in the Foreword, the six volumes of this issue of the World Weather Records have been so arranged as to provide a natural geographic separation into what are essentially units of a single continent. Two of the volumes, however, contain island and Ocean Weather Station data as well as those of the smaller continents.

Within each volume the data are presented alphabetically by station, within geographic areas which usually, but not necessarily, coincide with political entities.

Four means of locating desired information have been included. The Table of Contents at the beginning of this volume lists, for the data included, the major geographic divisions or countries, giving page numbers for notes and data as well as pages where lake levels, freeze and thaw dates, and sunspot numbers may be found. The three indexes at the rear of this volume provide information in greater detail. The first is a master list of all locations, station or area, included in the particular volume, listed alphabetically without regard to geographical division or country. In this index, country or major geographic area names are listed in capital letters while those of individual stations are not. Pages listed for notes and data are those on which these items begin for the particular location. In the second index, station names are listed in alphabetical order for each major geographical area or country. The final index is separated geographically into 10° latitude bands to permit easy location of data for special purposes.

The data listing for each station is headed with the name, latitude, longitude, and elevation at the close of the period for which data are published, and the geographic subdivision or country within which it is located together with the WMO number wherever one has been assigned. Also included are the page numbers where the station notes may be found.

Lake and river levels, sunspot numbers, and dates of freezing or thawing of rivers or lakes are grouped in separate sections following meteorological data.

ADJUSTMENTS FOR HOMOGENEITY

Previous issues of the World Weather Records have provided for homogeneity of records by adjusting the most recent period of record to the earlier period. In this volume data have been published as received. No attempt has been made to correct for relocation of stations, or changes in instrumentation or procedures. Each meteorological service was requested to provide, with the data, information concerning exposure, changes in location, instruments and observations or any other factors which might affect the homogeneity of the record. These have been included in the Station Notes whenever supplied. Particularly sharp breaks in the record are indicated in the body of the tables by separating the record with a solid black line. A dash indicates missing data.

CONVERSION OF UNITS

All data are presented in metric units, i.e. temperatures in degrees Celsius and tenths, precipitation rounded to the nearest whole millimeter, and pressure in millibars and tenths between 20° North Latitude and 20° South Latitude and whole millibars elsewhere. A set of tables is supplied as part of this volume to permit conversion to other systems of units. These conversion tables are selected from the publication, Smithsonian Meteorological Tables, Sixth Revised Edition, First Reprint 1958.

The totals of precipitation are understood to include all forms of condensed moisture; rain, snow, sleet, hail, etc. The water equivalents of solid precipitation are given after melting, weighing, or estimating. The letter "T" denotes an amount of precipitation more than zero but less than one-half millimeter.

METHODS OF AVERAGING

All means were computed by machine. Monthly period means are the sums of the monthly means divided by the number of years for which data are available. Period means were not computed for less than five years. Annual means of pressure and temperature are one-twelfth of the sum of the monthly or period means. Annual precipitation totals are the sums of the twelve monthly totals or monthly period means.

UNITS IN STATION NOTES

The units of height and distance used in the station notes are those furnished by the respective countries.

ERRATA

Where errata have been provided for previous volumes, they are published immediately following the data for the area concerned.

ABBREVIATIONS AND SYMBOLS

H_p: Height (above mean sea level) to which station pressure shown in this volume has been reduced. If different heights have been used for different periods, the information is carried in Station Notes.

H_z: Height of the barometer above mean sea level for the period shown.

H: Height of the ground at the station above mean sea level.

h_t: Height of the thermometer above ground.

h_r: Height of the rim of the precipitation gage above ground.

Lat.: Latitude of the station.

Long.: Longitude of the station.

E: Data have been estimated by the method described in the Station Notes for that station, or are based on incomplete data, or are uncertain for some other reason.

ARABIAN PENINSULA

ADEN

STATION NOTES

ADEN (1 station)

General: Station level pressure is not as a rule entered on climatological returns and it has not been practicable to include it here.

Sea level pressure values are monthly means of daily values, the latter being usually the means of four readings taken at 6 hourly intervals throughout the day at the zone time of the station nearest 0300, 0900, 1500 and 2100 hours GMT.

Temperatures are means of 1/2 (daily maximum + daily minimum) read at station zone time nearest 0900 hours GMT.

Precipitation has been corrected to read the total amount of rainfall recorded during the month to the nearest millimeter; it is usually measured daily at a zone time approximating to 0900 hours GMT.

The height of the station quoted is usually the height of the barometer cistern above M.S.L.

Data for Aden were supplied by the Meteorological Service of United Kingdom.

KUWAIT

STATION NOTES

KUWAIT (6 stations)

General: The standard of time for observations in Kuwait is GMT which is Local Standard Time minus three hours.

Pressure values are taken from fixed cistern barometers to the nearest 0.1 mb.

Mercury-in-glass thermometers are used for all measurements except for minimum temperatures where Alcohol Thermometers with an index are in use.

The dry, wet, maximum and minimum thermometers are mounted in a non-ventilated Stevenson Screen, made in Kuwait, mounted 125-135 cm. above ground.

Height of rain gage rim above ground is:

30 cm. above ground for rim 200 cm collector
60 cm. above ground for recorder rim of Dines syphon type

Anemometers and thermometers are compared with standard instruments. Precipitation and sunshine recorders are checked twice annually. Barometers are corrected to standard temperature and gravity as well as the pressure reductions which are done according to methods recommended in WMO Technical Regulations.

Monthly averages of pressure are calculated according to the number of observations made daily at a station.

For stations making hourly observations the monthly average is calculated by taking the average of the daily means throughout the month.

For stations making four or eight synoptic observations starting 0001 GMT the average is calculated by taking the four or eight hourly means throughout the month.

Mean monthly temperatures are equal to one half the total of the mean daily maximum plus the mean daily minimum.

The period for reading precipitation is 0600 hours to 0600 hours with the amount recorded on the first day.

MAGWA

Station closed April 1, 1960.

EXPERIMENTAL FARM KUWAIT 29 17N 47 56E 21 M

MUSCAT AND OMAN

STATION NOTES

MUSCAT and OMAN (2 stations)

General: Latitude, longitude, and elevation values given in table headings are those in effect 12/31/60.

MUSCAT

Data for Muscat were supplied by the Meteorological Service of Pakistan.

Mean monthly values of temperature equal 1/2(mean maximum + mean minimum). The H_b for Muscat is 6 meters as given in this volume rather than 5 meters as printed in earlier volumes. This value should replace the value published in 1941-45. Data for Muscat are available through May 1959. After this date the observatory was closed temporarily.

SALALAH

Data for Salalah were supplied by the Meteorological Service of the United Kingdom.

Station level pressure is not as a rule entered on climatological returns and it has not been practicable to include it here.

Sea level pressure values are monthly means of daily values, the latter being usually the means of four readings taken at 6 hourly intervals throughout the day at the zone time of the station nearest 0300, 0900, 1500 and 2100 hours GMT.

Temperatures are means of 1/2 (daily maximum + daily minimum) read at station zone time nearest 0900 hours GMT.

Precipitation has been corrected to read the total amount of rainfall recorded during the month to the nearest millimeter; it is usually measured daily at a zone time approximating to 0900 hours GMT.

The height of the station quoted is usually the height of the barometer cistern above M.S.L.

PROTECTORATE

OF SOUTH ARABIA

STATION NOTES

PROTECTORATE OF SOUTH ARABIA (1 station)

General: Station level pressure is not as a rule entered on climatological returns and it has not been practicable to include it here.

Sea level pressure values are monthly means of daily values, the latter being usually the means of four readings taken at 6 hourly intervals throughout the day at the zone time of the station nearest 0300, 0900, 1500 and 2100 hours GMT.

Temperatures are means of 1/2 (daily maximum + daily minimum) read at station zone time nearest 0900 hours GMT.

Precipitation has been corrected to read the total amount of rainfall recorded during the month to the nearest millimeter; it is usually measured daily at a zone time approximating to 0900 hours GMT.

The height of the station quoted is usually the height of the barometer cistern above M.S.L.

Data for Riyan were supplied by the Meteorological Service of the United Kingdom.

RIYAN PROTECTORATE OF S. ARABIA WMO 40586 14 39N 49 24E 25 M

TRUCIAL STATES

STATION NOTES

TRUCIAL STATES (1 station)

General: Station level pressure is not as a rule entered on climatological returns and it has not been practicable to include it here.

Sea level pressure values are monthly means of daily values, the latter being usually the means of four readings taken at 6 hourly intervals throughout the day at the zone time of the station nearest 0300, 0900, 1500 and 2100 hours GMT.

Temperatures are means of 1/2 (daily maximum + daily minimum) read at station zone time nearest 0900 hours GMT.

Precipitation has been corrected to read the total amount of rainfall recorded during the month to the nearest millimeter; it is usually measured daily at a zone time approximating to 0900 hours GMT.

The height of the station quoted is usually the height of the barometer cistern above M.S.L.

Data for Sharjah were supplied by the Meteorological Service of the United Kingdom.

BURMA

STATION NOTES

BURMA (5 stations)

General: Latitude, longitude, and elevation values given in table headings are those in effect at the end of 1960.

Wherever possible, data have been supplied to complete the 1941-1950 period.

AKYAB BURMA WMO 48062 20 08N 92 53E 5 M

CAMBODIA

STATION NOTES

CAMBODIA (5 stations)

General: Mean monthly values of pressure and temperature are based on observations taken at 3-hour intervals; 1800, 2100. . . . . 1500 hours GMT. Latitude, longitude, and elevation data are those applicable 12/31/60.

KOMPONG CHAM

Beginning January 1957, the pressure correction to sea level has been changed from +1.9 mb. to +1.7 mb.

SIEMREAP-ANGKOR

Beginning January 1957, the pressure correction to sea level has been changed from +2.3 mb. to +1.9 mb.

CEYLON

STATION NOTES

CEYLON (5 stations)

General: Mean monthly temperature values = $\frac{\text{mean maximum} + \text{mean minimum.}}{2}$ Latitude, longitude, and elevation values given in table headings are those in effect at the end of 1960.

NUWARA ELIYA

On December 1, 1960, the station was moved slightly, changing the elevation from 1881 meters to 1895 meters.

CHINA

STATION NOTES

CHINA (23 stations)

General: Data have been taken from available published sources and, wherever possible, those stations appearing in previous issues have been continued.

Latitude, longitude, and elevation values are taken from the same sources used for the data.

In a few instances, where changes have appeared in the record, data have been published for early years even though the station has appeared in previous issues. This will provide a long term homogenous record. Nanking and Shanghai are in this category.

HONG KONG

STATION NOTES

HONG KONG (1 station)

General: Data are from the Royal Observatory, Hong Kong. Monthly values of pressure and temperature are means of hourly observations.

Barometers are of the Kew-pattern and pressure readings are corrected for temperature and reduced to mean sea level and to standard gravity. The rain gage is the 8 inch type with rim 18 inches above the ground.

HONG KONG /ROYAL OBS. HONG KONG WMO 45005 22 18N 114 10E 33 M

INDIA

STATION NOTES

INDIA (47 stations)

General: Data given in the main tables for the years 1951 to 1960 are presented as recorded during the ten-year period. Data for the years prior to 1951 are for stations which are currently appearing in the Monthly Climatic Data for the World and for which earlier available data have not appeared in the previous issues of World Weather Records.

Latitude and longitude values of many of the stations have been slightly changed owing to redetermination or change in site. All changes are documented in individual station notes and values as on December 31, 1960 have been given in the tables.

Whenever there were changes in site or exposure during the decade, comparative observations of temperature and rainfall were taken, if considered necessary. Such corrections, derived from comparative observations for two or more years, to reduce the earlier data to the exposure at the end of the decade are given in the individual station notes and history section.

A standard height of 4 ft. (1.2 m.) above ground level for the bottom of the Stevenson Screen has been adopted at all the observatories of this department. The rim of the rain gauge is generally 1 ft. (30 cm.) above ground level.

At all stations, the site for the Stevenson Screen and rain gauge is such as to provide satisfactory exposure. No special shielding is provided for the rain gauge at any station.

During the years prior to 1951 and particularly before 1900, occassional observations may be missing.

Pressure: Prior to 1951 the pressure observations in the tables have been corrected to standard temperature, to constant of gravity at Lat. 45°, and to the level of the barometer as in 1920. The corrections for the changes in height have been computed on the basis of 1.0 mb. for each 30 ft. difference in the height irrespective of the height or temperature of the individual station. Changes in the height of the barometer level are indicated under the individual station notes and history section.

The data available for the years previous to 1889 are the means of the 1000 hours and the 1600 hours, (local time) observations; but in later years observations have in general been recorded only at 0800 hours, local time. Corrections taken from Indian Meteorological Memoirs Vol. XVII, have, therefore, been applied to the earlier data in order to make them comparable with the 0800 hours data of later years.

Recording of pressure in millibars instead of inches was introduced January 1, 1943.

The data available for the period January 1943 to February 1949 were recorded at 0800 hours I.S.T. and the data for the period March 1949 onwards were recorded at 0830 I.S.T. The corrections applied to reduce the pressure data for 0800 hours I.S.T. to 0800 hours local time, are indicated in the following table. A uniform correction of -0.2 mb. was applied to the data recorded at 0830 hours I.S.T. to reduce these to 0800 hours I.S.T.

CORRECTIONS APPLIED FROM JANUARY 1943 FOR REDUCING PRESSURE DATA FROM 0800 HOURS I.S.T. TO 0800 HOURS L.M.T.

In order that the continuity of pressure values shall not be broken, the mean monthly pressures at station level and reduced to mean sea level supplied for the period 1951-1960 are those as recorded at 0830 hours, Indian Standard Time.

The new International Barometer Conventions, adopted by W.M.O. in 1953, were implemented in this department with effect from January 1957. As a result of the new conventions, a correction of -0.1 mb. will have to be applied to all pressure values recorded up to the end of 1956, for all Indian Stations except the following stations whose corrections are given below:

Station	New Barometer Convention correction (mb.)
Mukteswar/Kumaun	-0.2
Darjeeling/Raj Bhawan	-0.2
Dibrugarh	-0.3
Darbhanga	-0.2
Bombay/Santa Cruz	0.0
Bombay/Colaba	0.0
Vislakhapatnam	0.0

Temperature: The entries for temperature are the means of the monthly average of daily maximum temperatures plus the monthly average of the daily minimum temperatures as recorded. Corrections due to changes in site/exposure are given under the individual station notes.

Precipitation: The entries for rainfall are the total precipitation for the month ending at the last morning observation of the month.

AGRA

Date	Site	Lat.	Long.	H_Z (m.)
12/1/1862-6/30/06	Medical School	27°10'N	78°02'E	169

Height of rim of rain gauge above ground 30 cm.

BIKANER

Date	Site	Lat.	Long.	H_Z (m.)
9/1/1877-1/13/1892	Civil Hospital	28°00'N	73°18'E	234
1/14/1892-8/19/37	" "	"	"	232
8/20/37-12/31/60	Memorial Hospital*	"	"	224

*The observatory was transferred to a new site at Prince Bijay Singh Memorial Hospital at a distance of about 1.5 miles (2.4 km.) from the previous location. Comparative observations were considered unnecessary.

There has been no change in the site of the observatory throughout the period 8/20/37-12/31/60.

Height of rim of rain gauge above ground 30 cm.

BOMBAY/COLABA

Date	Site	Lat.	Long.	H_Z (m.)
Prior to 1/51	Meteorological Office	18°54'N	72°49'E	11

There has been no change in the site of the observatory throughout the period 1/1/51-12/31/60.

Height of rim of rain gauge above ground 122 cm.

BOMBAY/SANTA CRUZ

Date	Site	Lat.	Long.	H_z (m.)
10/49-2/28/58	Aerodrome	19°05'N	72°53'E	8
3/1/58-12/31/60	Aerodrome*	19°07'N	72°51'E	15

*The observatory was transferred to a new site at the aerodrome from 3/1/58, without any break in the continuity of the observations. As the distance between the two sites is about 1 mile (1.6 km.) and the exposures are identical, comparative observations of temperature or rainfall have been considered unnecessary.

Height of rim of rain gauge above ground 31 cm.

CALCUTTA/ALIPORE

Date	Site	Lat.	Long.	H_z (m.)
Prior to 1/51	Meteorological Office	22°32'N	88°20'E	6

There has been no change in the site of the observatory throughout the period 1/1/51-12/31/60.

Height of rim of rain gauge above ground 43 cm.

CALCUTTA/DUM DUM

Date	Site	Lat.	Long.	H_z (m.)
9/29/46-5/8/54	Meteorological Office	22°39'N	88°27'E	10
5/8/54-12/31/60	Meteorological Office*	"	"	6

*The observatory was transferred to a new Meteorological Office building from the evening of May 8, 1954, without any break in the continuity of the observations. As the distance between the two sites is only 1 mile (1.6 km.) and the exposures are identical, comparative observations of temperature or rainfall have been considered unnecessary. Pressure data refer to the new site from January 1956 onwards.

Height of rim of rain gauge above ground 33 cm.

CHERRAPUNJI

Date	Site	Lat.	Long.	H_z (m.)
Prior to 1/51	Post Office	25°15'N	91°44'E	1313

There has been no change in the site of the observatory throughout the period 1/1/51-12/31/60.

Height of rim of rain gauge above ground 38 cm.

CUTTACK

Date	Site	Lat.	Long.	H_z (m.)

8/16/49-12/51	Aerodrome*	"	"	561
1/52-12/31/60	Aerodrome**	"	"	567

*The observatory was transferred to a new site at the Aerodrome at a distance of 6 miles (9.6 km.) from the previous location. Comparative observations of temperature and rainfall were taken. The corrections to be applied to reduce earlier data to the later exposure are given below:

Temperature:

Corrections

	Jan.	Feb.	Mar.	Apr.	May	Jun.	Jul.	Aug.	Sep.	Oct.	Nov.	Dec.
°F	-0.2	-0.4	+0.1	-0.3	+0.3	+0.2	+0.3	-0.1	-0.3	-0.5	-0.3	0.0
°C	-0.1	-0.2	+0.1	-0.2	+0.2	+0.1	+0.2	-0.1	-0.2	-0.3	-0.2	0.0

Rainfall:

Corrections - Insignificant.

**The observatory was transferred to a new Terminal Building at the Aerodrome at a distance of about 400 yards (366 m.) from the previous location. As the conditions of exposure at the two sites are identical, comparative observation of temperature or rainfall have been considered unnecessary.

Height of rim of rain gauge above ground 30 cm.

9/30/05-10/31/30	" "	"	"	563
11/1/30-12/31/60	Meteorological Office**	"	"	559

*The observatory was transferred to a new site in the premises of the Central Jail, Yeravda at a distance of about 10 miles (16.0 km.) from the previous location. Comparative observations were taken between the two sites. Information is not available regarding the results of these observations and whether the earlier data had been corrected for the change in site.

**The observatory was transferred again to a new site in the premises of the Meteorological Office at a distance of about 9 miles (14.4 km.) from the Central Jail, Yeravda. Comparative observations of temperature and rainfall were taken. The corrections to be applied to reduce the earlier data to the later exposure are given below:

Temperature:

Corrections

IRAN

STATION NOTES

IRAN (7 stations)

General: Latitude, longitude, and elevation values are those in use at the end of 1960.

Average monthly temperature values are 1/2 (mean daily maximum + mean daily minimum).

Monthly precipitation is the total of the daily values read at 1500 hours Iranian time (GMT + 2 1/2 hours).

KERMAN

The station was moved to the airport in December 1956.

ABADAN IRAN WMO 40831 30 22N 48 15E 3 M

IRAQ

STATION NOTES

IRAQ (11 stations)

General: Latitude, longitude, and elevation values given in the table headings are those in use at the end of 1960.

In some instances data included here appear to duplicate that already published, but are given to provide a complete record which has been checked and is homogenous.

All means are based on eight daily observations except as noted below:

STATION	DATE	ELEMENT	HOURS OF OBS. MISSING
Khanaquin	1/51-3/57	All elements	00, 09 & 21 GMT
	4/57-12/60	" "	00, and 21

BAGHDAD

Prior to 1937 observations were taken three times daily at Hinaida, about six miles from the airport.

SHAIBA

Data available for period 1/51-2/56 only. Observations were taken at 0300, 0600 and 1200 hours GMT.

STATION NOTES

JAPAN (42 stations)

General: Values of latitude, longitude and elevation given in the table headings are those in effect at the end of 1960. Changes which occurred during the period 1951-1960 are given under the individual stations.

Pressure: The monthly mean pressures of all stations for the years 1951 and 1952 are 1/3(06h + 14h + 22h),135° E meridian time; for the period 1953-1960 they are 1/4(03h + 09h + 15h + 21h),135° E meridian time.

Temperature: The monthly mean temperatures of all stations for the years 1951 and 1952 are 1/3(06h + 14h + 22h),135° E meridian time; for the period 1953-1960 they are 1/8(00h + 03h + 06h + 09h + 12h + 15h + 18h + 21h),135° E meridian time.

KASHMIR

STATION NOTES

KASHMIR (2 stations)

General: Data for Srinagar and Leh were supplied by the India Meteorological Department, New Delhi, India. For information concerning hours of observation and methods of computing means, see "General" notes for India. Latitude, longitude, and elevation given in the table heading is that used at the end of 1960.

The correction for both Leh and Srinagar for the new International Barometer Convention adopted by the WMO in 1953 is -0.3 mb. It was implemented in 1957.

LEH

Date	Site	Lat.	Long.	H_Z (m.)
Prior to 1/51	Moravian Mission House	34°09'N	77°34'E	3514

There has been no change in the site of the observatory throughout the period 1/1/51-12/31/60.

Height of rim of rain gauge above ground 30 cm.

SRINAGAR

Date	Site	Lat.	Long.	H_Z (m.)
Prior to 1/51	Museum	34°05'N	74°50'E	1587

There has been no change in the site of the observatory throughout the period 1/1/51-12/31/60.

Height of rim of rain gauge above ground 30 cm.

CORRECTIONS APPLIED FROM JANUARY 1943 FOR REDUCING PRESSURE DATA FROM 0800 I.S.T. TO 0800 L.M.T.

LAOS

STATION NOTES

LAOS (3 stations)

General: Values of latitude, longitude, and elevation given in the table headings are those in use at the end of 1960.

Monthly means of pressure and temperature are based on 12 observations daily taken at 0200 + 0400 . . . . . 2400 hours.

LUANG PRABANG LAOS WMO 48930 19 53N 102 08E 304 M

MACAO

STATION NOTES

MACAO (1 station)

General: Observations are taken 3 times daily. Precipitation values are the totals of the daily amounts read at the morning observation. Mean monthly temperatures are 1/2 (mean maximum + mean minimum). Mean monthly pressures are 1/3 (mean monthly pressures for 0900, 1500 and 2100 hours).

Latitude, longitude, and elevation values given in the table heading are those in use at the end of 1960.

NEPAL

STATION NOTES

NEPAL (1 station)

General: Data for Katmandu were supplied by the India Meteorological Department, New Delhi, India. For information concerning hours of observation and methods of computing means, see "General" notes for India. Latitude, longitude, and elevation values given in the table headings are those used at the end of 1960.

Date	Site	Lat.	Long.	H_Z (m.)
Prior to 1/51-12/31/57	Indian Embassy Building	27°42'N	85°21'E	1337
1/1/58-12/31/60	Indian Embassy Building*	"	85°20'E	1324

*The site of the observatory was changed within the limits of the Indian Embassy.

Comparative observations were not taken as the distance between the sites were within a few hundred meters.

Height of rim of rain gauge above ground 41 cm.

KATMANDU NEPAL 27 42N 85 20E 1324 M

PAKISTAN

STATION NOTES

PAKISTAN (22 stations)

General: The values of latitude, longitude and elevation given in the tables are the most recent ones. They have been checked for accuracy. Changes in location are given under individual station notes.

Pressure: Means published in the World Weather Records are based on observations as follows:

Date	Hour
8/47-2/49	0230 GMT
3/49-12/50	0300 GMT
1/51-12/60	0300 + 1200 GMT

Sea level pressure values are included only for those stations where pressure data are reduced to that level in conformity with the World Weather Records for that period (here refers to 1947-60).

For those stations at high elevations not having pressure data reduced to sea level, only station pressure is included here. The following are in this category:

Dalbandin	Panjgur
Fort Sandeman	Parachinar
Kalat	Quetta/Cantonment
Murree	Quetta/Samungli

Temperature: Mean values have been the average of daily maximum and daily minimum throughout the period.

CHITTAGONG

On September 27, 1957 at 0500 hours GMT, the barometer was moved from its position on the south wall of the Telegraph Master's room at a height of 87 ft. (27 m.) m.s.l. to the north wall of the Telecommmunications Building, a distance of 150 ft. The new location is 46 ft. (14 m.) m.s.l. A correction of +1.4 mb. should be applied to station pressure data prior to September 1957 to make it comparable to subsequent data.

HYDERABAD

On April 15, 1955 the observatory was shifted from the old site at the Telegraph Office to a new site in the near-by District Local Board Office. The conditions of exposure and environments being about the same, the data of both the sites have been combined. Since the H_b has changed from 96 ft. (29 m.), to 98 ft. (30 m.), a correction of -.1 mb. may be applied to the station level pressure prior to April 1955 to make it comparable to subsequent data.

JESSORE

Prior to April 1958 the barometer was on the north wall of the Collector's Bungalow with H_b of 26 ft. (8 m.) m.s.l. Beginning with April 1958, the data refers to a new observatory at M.M. College, a distance of about 400 yards. The new barometer's H_b is 23 ft. (7 m.) m.s.l. The correction to be applied to the past station level pressure data to make it comparable with the latest data, is +.1 mb.

PASNI

The barometer was moved April 2, 1955 with a change in H_b from 10 ft. (3 m.) to 28 ft. (9 m.) m.s.l. The Pressure values through January 1955 refer to 10 ft. (3 m.); those from February 1955 for H_b of 28 ft. (9 m.) m.s.l. The correction to be applied to the past station level pressure data to make it comparable with the latest data is -.6 mb.

PESHEWAR

Redetermination gives height of barometer cistern as follows:

Date	Elev. (m.)
3/1/29-12/31/50	H_b 358.8

The elevations of 355 meters and 358 meters given in previous issues are to be disregarded. Likewise, a correction of +0.4 mb. applied to the data from July 1945 to December 1950 is cancelled and the data published in the 1941-1950 issue of World Weather Records should be adjusted accordingly.

QUETTA/SAMUNGLI

Date	Elev. (m.)
1947-8/25/48	1618
8/28/48-10/15/58 (0900Z)	1601
10/15/58-12/31/60	1587

Pressure values through July 1948 refer to 1618 m. A correction of +1.8 mb. is necessary to bring these data in line with the later values at 1601 m.

Pressure data from 8/28/40-10/15/58 refer to 1601 meters elevation. To bring these data in line with the later data a correction of +1.3 mb. should be applied.

SOVIET UNION

STATION NOTES

SOVIET UNION (86 stations)

The stations presented in this volume include only those listed under WMO Region II. Insofar as possible, latitude, longitude and elevation values are those in use at the end of 1960.

At most stations in high latitudes, precipitation data have been omitted for the winter months (October to May).

TAIWAN

STATION NOTES

TAIWAN (6 stations)

General: Mean values of pressure and temperature are calculated from readings at 0600, 1400, and 2100 hours, 120th E meridian time. Barometer readings are reduced to 0°C and to standard gravity.

Station locations have not changed during the 1951-1960 period and latitude, longitude, and elevation data are those applicable at the close of 1960.

HENGCHUN TAIWAN WMO 46759 22 00N 120 45E 24 M

THAILAND

STATION NOTES

THAILAND (11 stations)

General: Latitude, longitude, and elevation values given in the table headings are those in use at the end of 1960.

Barometric readings are corrected for temperature, latitude, and mean sea-level. Mean monthly values are based on the 0700 hours observation.

Mean temperature is the mean of 1/2(daily max. + daily min.).

ARANYAPRATHET THAILAND WMO 48462 13 42N 102 35E 44 M

TIBET

STATION NOTES

TIBET (1 station)

General: Data for Lhasa were supplied by the India Meteorological Department, New Delhi, India. For information concerning hours of observation and methods of computing means, see "General" notes for India. Latitude, longitude, and elevation values given in the table heading are those being used when the station, which was manned by an Indian staff, was closed down.

LHASA

Date	Site	Lat.	Long.	H_Z (m.)
Prior to 1/51	Indian Embassy Bldg.	29°40'N	91°07'E	3685

The rain gage was situated on top of the Embassy Building.

LHASA TIBET 29 40N 91 07E 3685 M

VIET NAM

STATION NOTES

VIET-NAM (5 stations)

General: Monthly means of pressure and temperature are based on the 12 daily observations at even hours (either direct observations or observations deduced from graphs).

Pressures are reduced to sea-level in accordance with the International Tables.

BANMETHUOT

From 1954 to March 1959 this station was located on a high plateau, 490 meters above sea level. The site was adequate.

Beginning April 1959 the station was moved to a new site, 537 meters above sea level.

Due to the difference in elevation both station pressure and temperature vary between the two locations.

SAIGON

Date	Location
1906-1930	(Downtown Saigon) Richaud Street - Poor site - only mildly representative
1941-1944	Tansonhoa - Site adequate
1947-1960	Tansonnhut Airport - Site adequate

The latter two locations are 2 kilometers apart.

CONVERSION TABLES

CONVERSION TABLES

(Adapted or copied from Smithsonian Meteorological Tables, Sixth Revised Edition, First Reprint, 1958, Washington, D. C.)

Temperature - Degrees Celsius to Fahrenheit
Precipitation - Millimeters to Inches
Pressure - Millibars to Inches
- Millibars to Millimeters

The table for converting degrees Celsius to degrees Fahrenheit is a direct reproduction of pages 26 and 27 from the Smithsonian Meteorological Tables. The tables for converting precipitation from millimeters to inches and pressure from millibars to millimeters or millibars to inches are based on the following conversion factors from the Smithsonian Meteorological Tables:

1 millimeter = 0.039370079 inch
1 millibar = 0.7500616 millimeter of mercury
1 millibar = 0.02952998 inch of mercury

PRESSURE CONVERSION TABLE - MILLIBARS TO INCHES
1 MILLIBAR = 0.02952998 INCH OF MERCURY
